

## How can we change the world with Tkeycoin?

Ten years have passed since the appearance of bitcoin, the technology development goes far in 1983, when the first electronic cash protocols were proposed.

However, after so many years, the existing cryptocurrencies do not have the qualities of real money necessary to attract a mass consumer, in connection with which the share of the cryptocurrency market is negligible in comparison with conventional currencies.

The problem is directly related to the lack of a wide market, cryptocurrency users forced to use her it only as a means of quick earnings.

Fundamental analysis points to the 4 main obstacles that stop other cryptocurrencies from taking place in a wide market:

### • Scalability

The low bandwidth of the Protocol does not allow cryptocurrencies and tokens to compete with centralized payment systems Visa, Mastercard, American Express, thus the use of digital currencies is minimized due to the inability to use in the banking and financial sector.

### • Narrow application

Cryptocurrencies are mainly used as a means of earning for investors and are practically not used by another part of society.

### • The absence of the corporate market

Users cryptocurrency can only sell and exchange their assets

### • Hard usage

To start using cryptocurrency, a person needs to deal with a number of technical issues.

## We make the market accessible

We approached the market from an economic and scientific point of view, borrowing the best from Bitcoin, Ethereum, DASH and other alternative currencies, mixing modern concepts and based on the world experience of IBM, Microsoft and a number of other companies and scientific research.

Our goal is to make cryptocurrency widely available as a means of payment by investing in it all the properties of the ordinary currency. Users will be able to make payments online and offline in all areas of economic activity who accepts payment by credit card (Shops, cafes, restaurants, public institutions, etc.).

Economic policy Tkeycoin will allow to debug a balanced ecosystem between cryptocurrencies and society, which is much better suited to the needs and requirements of its users than paper money.

## Solutions and our role in the world of blockchain technologies

Due to the mathematical and scientific approach, we make the concepts more open and accessible for use in the new conditions on the basis of own blockchain Protocol TBP (Tkeycoin Blockchain Protocol), **which creates new opportunities for millions of users:**

### Bandwidth

The Protocol will be able to process up to 500,000 transactions per second, through the use of the work of a highly developed mechanism for tracing circuits. This will expand the boundaries of application and will allow the use of cryptocurrencies in the banking and financial spheres.

### Easy exchange all over the world

Make payments online or offline using the mobile app, as simple as you've done with Android Pay Apple Pay. Payment by cryptocurrency of goods and services in real life or on the Internet, by converting TCD to store currency through the exchange or the Bank.

### Corporate market

Secure shopping worldwide in the international Marketplace-Tkeycoin, with cashback up to 30%. Buy any goods-products, cars, yachts, real estate, pay for rent, cellular communication, Internet, get advertising, legal and financial services. The list of stores is constantly expanding.

### Fair shopping

The whole story about the seller is stored in a decentralized magazine. The system allows for the implementation of a "verification Protocol" that ensures that store ratings are attributed in a completely transparent and fair manner. Users who have purchased products can leave feedback, thereby motivating sellers to provide services properly.

### The guarantor of the transactions

All operations within the Tkeycoin DAO network will be monitored through secure smart-contracts, which will allow monitoring unfair actions by third parties.

### Help others and get currency

Any user can provide services to the business using the internal freelance service, receiving a reward in the TCD cryptocurrency.

### Reduce costs of Your business by 45-50%

Accept payments without a checking account using Tkeycoin Internet acquiring with a low Commission of 1% for all international transactions.

### Smart solutions

On the basis of the Protocol, decisions can be created for banking, financial and state spheres of activity.

### **The Developers OpenSource**

The platform will open doors for developers, who in turn can create technological solutions, applications and DApps. We will create a working environment based on open code for all users.

### **Tokens Platform for Start-Up**

Based on the TBP Protocol, companies will be able to issue tokens and conduct ICO (crowdsale) for the development of their technologies and business.

### **Manage all your finances with tkeycoin-wallet**

Through the use of the platform, users have full control over their payments, Bank cards, virtual accounts, money transfers and cryptocurrency exchange.

### **Easy integration**

Integration with The tkeycoin platform will be as easy as with documented SDKs and plugins for all major platforms and languages.

### **Reduce the cost of mining and electricity**

Users owning from TCD 3000 coins receive remuneration for the chain building blocks of the entire network Tkeycoin. With the number of coins your abilities grow.

## **The profit platform:**

The platform is financed by commissions for transactions and financial services for business:

- Commission from the mining;
- Internet-Acquiring;
- Token issuance (ICO);
- Launch apps and DApps;
- Implementation of solutions for business, banking, financial and public sectors;
- Third-party funding;
- Increase the cost of digital TCD capital.

The funds are reinvested in the development of the ecosystem and related projects.

## **Why do we conduct ICO?**

This is the most effective solution for the implementation of all Tkeycoin functionality. Additional investments could accelerate project development by providing the necessary conditions for development and scaling up.

The average age of the team is 35 years, the participants already have experience in business, programming, cryptography, scientific research and other industries. These factors allow us to create a completely different approach based on science and mathematics rather than on our own benefit.

We are driven by a great idea and new technologies, we want to attract the attention of a wide audience to scale the project at the international level. Joining the project world researchers, developers, businesses and millions of users.

Let's join forces and make this world a better place!
